

Cleaning and maintaining – Composite Inserts

Maintenance:

Regular maintenance prevents build-up of dirt and grease which will reduce the anti-slip properties of these inserts and lessen the visual impact.

Daily Cleaning- Internal Application:

Sweep the area daily and spot clean any obvious marks or grease spots with a neutral cleaner and warm water. Very stubborn stains can be removed by gently using a stiff brush and a heavy duty alkaline cleaner. Dry thoroughly before allowing traffic on the staircase.

Weekly Cleaning- Internal Application:

Sweep the area then clean the entire area with a neutral and warm water. A green maintenance pad may be used. Change the water during this process to eliminate the spread of grime. After this process is complete, the entire area should be thoroughly dried with a clean cloth.

External Cleaning:

To be done twice a week or as required. Use a 200-bar pressure washer with a traffic film remover. Very stubborn stains can be removed by gently using a stiff brush and a heavy duty alkaline cleaner. Dry thoroughly before allowing traffic on the staircase.

Note:

Do not use polish or floor sealers on the inserts as this will adversely affect the slip resistant properties.

Recommended Cleaners:

In all cases a Neutral Cleaner should be used such as Neutral Scrubber Dryer Detergent F176 or a Heavy Duty Alkaline Cleaner F0 52 from Selden Research Ltd. www.selden.co.uk
